

ReddiNet Enables Real-Time Data Exchange Among Hospitals and Emergency Providers, with Microsoft Azure Providing 24/7 System Reliability

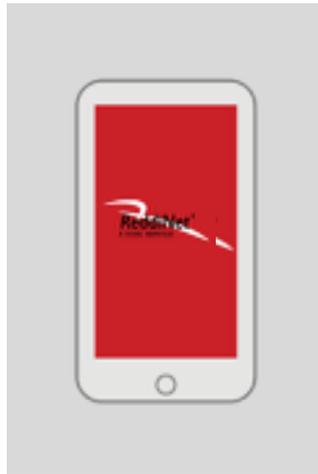

MICROSOFT AZURE SOLUTION BUILDER PROFILE: ReddiNet

ReddiNet enables EMS, hospitals, and first responders to stay connected during day-to-day operations, disasters, and large-scale events requiring emergency response. ReddiNet allows for the real-time exchange of data regarding emergency room status, patient tracking, and ambulance status. ReddiNet modules can be customized on a county-by-county basis.

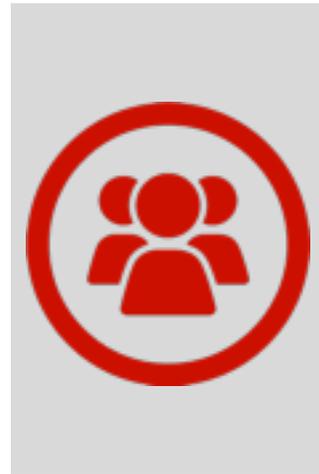

WHAT WE OFFER

The ReddiNet application offers modules for tracking hospital status, mass-casualty incidents, HAVBED reporting, facility assessments, and sending secure messages. It can be customized by region. Microsoft Azure services provide HIPAA protection and failover to multiple time zones, critical to ReddiNet's need for 24/7 availability.

ReddiNet's mobile apps let customers connect from anywhere. The apps provide the ReddiNet modules with real-time data, GPS location data, push notifications, search capability, and secure access. The apps ensure availability of critical data to users in the field. Downloads are free for ReddiNet customers for iOS and Android.

The ReddiNet Family Reunification Center (FRC) assists in reuniting patients and missing persons with family members. This portal helps hospitals and emergency support teams and can be used at Family Assistance Centers. You don't need to be a current user of the ReddiNet application to purchase FRC.

Hospitals, clinics, surgery centers, and long-term care facilities use ReddiNet's assessment module to report pandemics and situational status, and to say what services and resources they have or need. The bed-reporting module enables hospitals to show availability of licensed beds and share patient census data.

WHAT OUR CUSTOMERS ARE SAYING

"Los Angeles County EMS has been relying on ReddiNet as our emergency communications provider for almost 30 years. From coordinating multi-casualty incidents to conducting facility status and bed availability polls, ReddiNet has been there for us." – Cathy Chidester, Director, L.A. County Emergency Medical Services Agency (EMS)

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
